ASX Release

7 November 2006

FURTHER GOOD COPPER RESULTS FROM WEST KALKAROO

Havilah Resources NL (Havilah – ASX:HAV) wishes to advise that it has received good assay results for a further three reverse circulation drillholes that were completed last month at the West Kalkaroo prospect in northeastern South Australia, as follows :

Hole ID	From	To	Metres	Cu%	Au g/t
KKRC127	78	159	81	0.48	1.6
KKRC128	105	185	80	0.78	0.58
KKRC126	99	141	42	0.15	0.71
and	123	168	45	0.30	0.46

Wide intervals of copper and gold have now been discovered over a strike length of 400 metres at West Kalkaroo at grades generally better than the Kalkaroo deposit average, although this prospect lacks significant molybdenum grades. A high proportion of the intersections are of oxidized material, with appreciable native copper metal often present. As with other drillholes at West Kalkaroo, sample quality remains an issue of concern in addition to the reliability of results for intervals with coarse-grained native copper. In general, it is believed that the present assaying methods under-call the true copper values where appreciable native copper is present. These aspects will be addressed in detail in a future feasibility study.

Havilah has recently completed drilling on two further 100 metre spaced section lines to the west where good visual mineralization was observed and results for these drillholes are awaited.

It is evident that West Kalkaroo will add appreciably to the total Kalkaroo copper-gold resource that currently stands at 70 million tonnes of 0.46% Cu, 0.47 g/t Au, 124 ppm Mo (optimized open pit resources to 230 metres depth). An updated resource will be calculated once all results from the current drilling round are to hand. In the meantime, Havilah is presently drilling some further strategically placed drillholes at West Kalkaroo in order to better define the mineralization on certain section lines and thereby improve confidence in the resource modeling.

Dr K R Johnson
CHAIRMAN

The information in this report has been prepared by Dr Bob Johnson who is a member of the Australasian Institute of Mining and Metallurgy and Dr Chris Giles who is a member of The Australian Institute of Geoscientists. Drs Johnson and Giles are employed by the Company on consulting contracts. They have sufficient experience which is relevant to the style of mineralization and type of deposit under consideration to qualify as Competent Persons as defined in the JORC Code 2004. Drs Johnson and Giles consent to the release of the information compiled in this report in the form and context in which it appears.

Enquiries should be directed to Dr Bob Johnson, Chairman, on (08) 83389292
